

# Vayana Comm GSTIN Field for Search Tax Payer and Return Filing Status API

## Introduction:

For the Tax Payer Search API and the Return Filing Status API, a new configuration parameter “vayana\_comm\_gstin” is introduced.

This GSTIN is used by Vayana for API consumption/billing purposes specific to these 2 API calls.

## Note:

1. This GSTIN value does not impact any other API or any other features.
2. This GSTIN has to be one of the Tax Payer GSTINs belonging to your organization against which API calls specific to Tax Payer Search and Return Filing Status APIs would be billed by Vayana.

This document explains how to configure the **vayana\_comm\_gstin** parameter.

## Configuration:

Navigate to the Vayana iFlow. Click Configure.

Use the field “**vayana\_comm\_gstin**” to fill the GSTIN to be used for API Consumption billing for Tax Payer Search and Return Filing Status API calls. See Highlighted parameter below:

## Configure "Vayana"
